PALLET TILT

It's **BACK-BREAKING WORK** to un-stack and re-stack palletized loads. Swap pallets, pull freezer spacers, and insert slip sheets in minutes with the **KOHLER PALLET TILT**.

Efficiently and safely tip the loaded pallet on its side. Contents are braced in place by the V-carriage design and retractable clamp. With the turn of a knob, the load gently slides to expand. This creates gaps between the stacked product and pallet. Now operators can easily swap damaged pallets, or exchange pallet materials (wood, plastic, aluminum, slip sheets, skids, etc.) to meet sanitation requirements, storage and shipping needs, or cost savings goals. If chilling your product, maximize thermal efficiency by inserting or removing freezer spacers.

Our heavy-duty design is constructed with sanitary stainless steel. The Kohler Pallet Tilt is valued in many industries including cold storage, food processing, wholesale, retail, paper, personal care, and chemical.

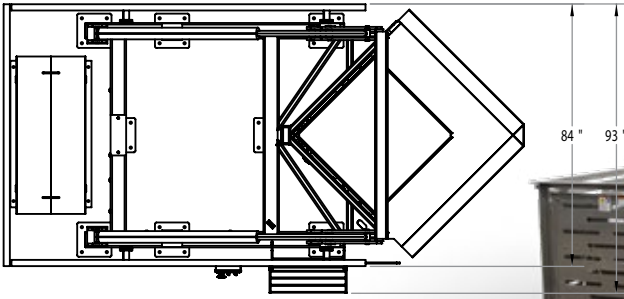

FEATURES

- Unique gentle sliding action prevents product damage caused by the shoving and jerking motion of competing pallet swapper designs
- Ground level loading and unloading provides improved safety and convenience over pallet inverters
- All-new materials, built to last, constructed with food-safe stainless steel
- Built to meet customer needs (pallet and load specifications, operation)
- Simple operation requires only one operator with a forklift or pallet jack
- Attached safety guards
